

FEATURED PROJECT

Wastewater Treatment Plant Upgrade (WA)

TechBoard being utilised in a tube and clip project for **sandy and often flooded areas** at a waste-water treatment plant upgrade.

The TechPlas conductive “H-Joiner” accessory is also being utilised to mitigate any potential electro-static discharge.

Standard timber based planks in these areas would often **last less than 6-months** and those in excrement filled areas were disposed of immediately after use. The TechBoard lasts significantly longer on-site and is easily cleaned with use of a pressure washer.

The **TechBoards longevity and lighter weight** presented an ideal solution for this environment.

Thanks to Damian Beausang (Director) at AEG (WA)
